

Release Notes include New Features, Enhancements, Fixes, and Known Issues.

Internal users can use the ISSUE code to view the original Issue in JIRA.

External users can use the menu path in the DESCRIPTION to navigate to the page of the software application where the change was applied. Consult with your Solution Consultant for more information.

### NEW FEATURES and ENHANCEMENTS

ISSUE	DESCRIPTION OF THE NEW FEATURE OR ENHANCEMENT
<a href="#">MM-3295</a>	<b>Add Outcome measure Functionality to Forms:</b> Users can now create custom forms with multiple choice questions with scores for each answer that automatically add up to a total score. This is commonly used in standard assessment forms (such as Basic Addiction Monitor BAM or Personal Health Questionnaire PHQ-9) and can be used to track outcomes over time.
<a href="#">MM-3306</a>	<b>Convert Forms page to Angular:</b> This migrates the Forms tab in the Client page to an HTML page as part of the over-arching migration away from Flex towards HTML standards. Functionality of contained toolbar buttons and other dialogs is only minorly impacted.
<a href="#">MM-3323</a>	<b>Create a daily census report:</b> This provides the basis for admission history reports showing who was admitted and how long.

### FIXES

ISSUE	DESCRIPTION OF THE FIX
	<b>No bug fixes in this release</b>

### KNOWN ISSUES

ISSUE	DESCRIPTION OF THE KNOWN ISSUE
<a href="#">MM-3311</a>	<b>Create Master Treatment Plan Window:</b> As part of the Flex to HTML migration, the dialog window to create master treatment plans as ordered lists of other treatment plans has yet to be migrated and is currently unavailable.
